Enteral Nutrition, Low Protein Food Products, and Special Medical Formulas
Clinical Coverage Criteria

Overview
The General Laws of Massachusetts mandate coverage for non-prescription enteral formulas for home use for which a physician has issued a written order and which are medically necessary for the treatment of malabsorption / malnutrition caused by Crohn’s disease, ulcerative colitis, gastroesophageal reflux, gastrointestinal motility, chronic intestinal pseudo-obstruction, and inherited diseases of amino acids and organic acids. Coverage for inherited diseases of amino acids and organic acid shall include food products modified to be low protein (low protein food products). Coverage is also mandated for those special medical formulas which are approved by the Commissioner of the Department of Public Health, prescribed by a physician, and are medically necessary for treatment of phenylketonuria, tyrosinemia, homocystinuria, maple syrup disease, propionic acidemia, or methylmalonic acidemia in infants and children or medically necessary to protect the unborn fetuses of pregnant women with phenylketonuria. In addition Masshealth and Medicare impose similar rules for coverage of enteral formulas.

Policy
Fallon Health requires Prior Authorization for Enteral Nutrition, Low Protein Food Products, and Special Medical Formulas. These requests must be supported by the treating provider(s) medical record

Commercial Plans:
Requests for preauthorization must be accompanied by clinical documentation that supports appropriate medical use of the product. Documentation from the most recent medical evaluation must include all of the following:

1. The primary diagnosis name and code specific to the nutritional disorder for which enteral nutrition products are requested
2. The secondary diagnosis name and code specific to the co morbid condition, if any
3. Clinical signs and symptoms, including anthropometric measures
4. Comprehensive medical history and physical exam
5. Testing results sufficient to establish the diagnosis of the covered condition (see medical criteria below)
6. Route of enteral nutrition
7. Documentation of past and current treatment regimens
8. Type and estimated duration of the need for enteral nutritional products

Covered Services:
Inborn Errors of Metabolism
As required by Massachusetts state law, specialized formula appropriate to the condition will be for metabolic diseases for patients with the following diagnoses.
• Tyrosinemia
• Homocystinuria
• Maple syrup urine disease
• Propionic acidemia
• Methylmalonic acidemia
• Urea cycle disorders
• Phenylketonuria (PKU)
• Other organic and amino acidemias.
• PKU benefit coverage is provided for infants and children as well as for the protection of unborn babies of women who have PKU.1

Malabsorption:
Specialized formula appropriate to the condition will be for patients with the following diagnoses:
• Crohn’s disease
• Ulcerative colitis
• Gastrointestinal dysmotility
• Gastroesophageal reflux (GERD)
• Chronic intestinal pseudo-obstruction.

Documentation required to demonstrate malabsorption includes pertinent clinical records and lab work which supports the diagnosis WITH evidence of growth failure, including a copy of the growth chart.
1. Clinical documentation such as chronic diarrhea, abdominal distention, failure to gain weight/weight loss, fecal fat or reducing substances in stool.
2. Growth failure: Deceleration of growth velocity across 2 major percentiles on a standard growth chart

IgE- Mediated and Non-IgE Mediated Formula intolerance for Infants < 1 Year of Age Covered Conditions:
IgE mediated Formula Intolerance
Covered Conditions:
• Eosinophilic esophagitis
• Allergic enterocolitis
• Symptoms such as angioedema, wheezing, anaphylaxis

Documentation requirement includes:
1. Medical records detailing the clinical picture
2. Other clinical information such as consultations, radiological studies, laboratory studies and/or endoscopy reports
3. Gross blood in stool with documentation that other nonformula related etiologies such as fissures and/or infectious issues have been ruled out or documentation of positive heme stool test results

Non-IgE Mediated Formula Intolerance: persistent gastroenterological symptoms such as recurrent vomiting and/or diarrhea:

Documentation requirement includes:
1. Evaluations/assessments for the reported symptoms of formula intolerance with documentation of formula changes and other treatment modalities
2. All other pertinent medical records, AND
3. A copy of the growth chart documenting evidence of growth failure Deceleration of growth velocity across 2 major percentiles on a standard growth chart.

When clinical criteria are met, hydrolyzed protein formulas may be approved for up to one year of age. Amino Acid formulas are covered as described above for infants who fail a 5 day trial of hydrolyzed protein formula.

Prematurity:
A transition formula, such as Neosure or Enfacare is authorized through 3 months of age when the weight of a premature infant at the time of hospital discharge is below the 10th percentile when corrected for gestational age. After 3 months of life, requests are re-evaluated based on meeting clinical requirements for one of the other covered conditions.

The following do not meet the criteria above and are not covered:
• Standard non-hydrolyzed and non-elemental milk formula and soy based formulas are not covered; these are not considered treatment for a medical condition and are regarded as food.
• Special medical formulas or non-prescription enteral formulas when used for other conditions not listed in the preceding pages of this policy.
• Blenderized baby food or regular store-bought food for use with an enteral feeding system.
• Over-the-counter or prescription foods when store-bought food meets the nutritional needs of the patient.
• Formula or food products used for dieting or for a weight-loss program.
• Banked breast milk.
• Dietary or food supplements or food thickeners.
• Supplemental high protein powders and mixes.
• Lactose free foods or gluten-free products.
• Baby foods.
• Oral vitamins and minerals.
• Medical foods (e.g., Foltx, Metanx, Cerefolin, probiotics such as VSL#3) including FDA-approved medical foods obtained via prescription.

Fallon Medicare Based Plan Coverage (Please note this criteria will be used for NaviCare members):
Enteral nutrition is defined by Medicare as the provision of nutritional requirements through a tube into the stomach or small intestine.

Enteral nutrition is covered for Fallon Medicare Plan members who meet the following criteria:
1. Enteral nutrition products that are administered orally are not covered.
2. Enteral nutrition is covered for a patient who has:
   • Permanent non function or disease of the structures that normally permit food to reach the small bowel or

- Disease of the small bowel which impairs digestion and absorption of an oral diet either of which requires tube feedings to maintain a normal weight.

The member must have a permanent impairment. Permanence does not require a determination that there is no possibility that the member’s condition may improve sometime in the future. If the documented judgment of the physician is that the impairment can reasonably be expected to exceed three months (ninety days), the test of permanence is considered met. This is consistent with CMS guidelines. Link: to CMS Medicare LCD

**MassHealth Coverage**

Enteral nutrition is defined by MassHealth as nutrition requirements that are provided via the gastrointestinal cavity (orally), or through a tube, or stoma distal that delivers nutrients to the oral cavity. Link to MassHealth policy: [Masshealth Enteral Nutrition Coverage](#)

**Exclusions**

- Services that do not meet the criteria outlined above.
- Nutritional supplements, medical foods and formulas unless described above as covered.
- Dietary supplements, specialized infant formulas (such as Nutramigen, Elecare and Neocate), vitamins and/or minerals taken orally to replace intolerable foods, supplement a deficient diet, or provide alternative nutrition for conditions such as hypoglycemia, allergies, obesity and gastrointestinal disorders. These products are not covered even if they are required to maintain weight or strength.

reviewed at committee), 01/24/2018 (updated references)

Not all services mentioned in this policy are covered for all products or employer groups.
Coverage is based upon the terms of a member’s particular benefit plan which may
contain its own specific provisions for coverage and exclusions regardless of medical
necessity. Please consult the product’s Evidence of Coverage for exclusions or other
benefit limitations applicable to this service or supply. If there is any discrepancy
between this policy and a member’s benefit plan, the provisions of the benefit plan will
govern. However, applicable state mandates take precedence with respect to fully-
insured plans and self-funded non-ERISA (e.g., government, school boards, church)
plans. Unless otherwise specifically excluded, federal mandates will apply to all plans.
For Medicare and Medicaid members, this policy will apply unless Medicare and
Medicaid policies extend coverage beyond this policy.
